

# Contents

<b>1</b>	<b>Introduction: Signals and Systems</b>	<b>5</b>
1.1	Signals . . . . .	5
1.2	Classification of signals . . . . .	5
1.2.1	Real vs. complex valued . . . . .	5
1.2.2	Number of channels . . . . .	5
1.2.3	Dimensionality . . . . .	5
1.2.4	Continuous vs. discrete independent variable . . . . .	6
1.2.5	Continuous- vs. discrete-valued . . . . .	6
1.2.6	Deterministic vs. stochastic . . . . .	6
1.2.7	More classifications . . . . .	6
1.3	Some standard signals . . . . .	6
1.3.1	Unit step function . . . . .	6
1.3.2	Sign (signum) function . . . . .	7
1.3.3	Unit (delta) impulse and sifting property . . . . .	7
1.3.4	Complex exponential functions . . . . .	9
1.4	Systems . . . . .	10
<b>2</b>	<b>Analysis of LTI systems in the time domain</b>	<b>15</b>
2.1	Application of the superposition principle . . . . .	15
2.2	Step response . . . . .	15
2.3	Impulse response . . . . .	16
2.4	Relation between impulse response and step response . . . . .	16
2.5	Convolution sum (discrete-time LTI systems) . . . . .	17
2.6	Convolution integral (continuous-time LTI systems) . . . . .	18
2.7	A stability criterion . . . . .	20
<b>3</b>	<b>Fourier Transform (continuous-time)</b>	<b>21</b>
3.1	Introduction . . . . .	21
3.2	Convergence and Dirichlet Conditions . . . . .	21
3.3	Transformation of Delta Impulses . . . . .	22
3.4	Sign Function and Unit Step Function . . . . .	22
3.4.1	Sign Function . . . . .	22
3.4.2	Unit Step Function . . . . .	22
3.5	Properties of the Fourier Transform . . . . .	23
3.5.1	Reflection . . . . .	23
3.5.2	Conjugation . . . . .	23
3.5.3	Symmetry, real/imaginary and odd/even . . . . .	23
3.5.4	Exchange (time/frequency duality) . . . . .	23
3.5.5	Linearity . . . . .	23
3.5.6	Shift . . . . .	23

	3
3.5.7	Time and frequency scaling (stretch) . . . . . 23
3.5.8	Convolution . . . . . 23
3.5.9	Derivatives (differentiation) . . . . . 24
3.5.10	Integration . . . . . 24
3.5.11	Central ordinate (initial value) . . . . . 24
3.5.12	Moment . . . . . 24
3.5.13	Parseval's Relation and Energy Density . . . . . 25
3.6	Real Causal Function . . . . . 25
3.7	Time and Bandwidth . . . . . 26
3.8	Description of Linear Time-Invariant Systems in the Frequency Domain . . . . . 28
3.8.1	Frequency Response . . . . . 28
3.8.2	Phase Delay and Group Delay . . . . . 29
3.9	Sampling . . . . . 30
3.9.1	Introduction . . . . . 30
3.9.2	Fourier Transform of Sampled Signals . . . . . 31
3.9.3	Sampling Theorem for Low-pass Limited Signals . . . . . 32
3.10	Reference: Fourier Transform . . . . . 33
3.10.1	Definition . . . . . 33
3.10.2	Properties . . . . . 33
3.10.3	Some transformation pairs . . . . . 34
<b>4</b>	<b>Discrete Time Fourier Transform</b> . . . . . <b>35</b>
4.1	Introduction and basic properties . . . . . 35
4.1.1	Definition . . . . . 35
4.1.2	Convergence . . . . . 35
4.1.3	Periodicity . . . . . 35
4.2	Delta Impulses in the Frequency Domain . . . . . 35
4.3	Normalized and denormalized time and frequency . . . . . 35
4.4	Reference: Discrete Time Fourier Transform . . . . . 36
4.4.1	Definition . . . . . 36
4.4.2	Properties . . . . . 36
4.4.3	Some transformation pairs . . . . . 37
<b>5</b>	<b>Description and analysis of discrete-time LTI systems</b> . . . . . <b>38</b>
5.1	Block diagram . . . . . 38
5.2	Difference equation . . . . . 38
5.3	First values of the impulse response from difference equation . . . . . 39
5.4	Frequency response . . . . . 39
5.5	Types of difference equations and corresponding systems . . . . . 40
5.5.1	Non-recursive difference equation and FIR system . . . . . 40
5.5.2	Purely recursive difference equation . . . . . 40
5.5.3	General recursive difference equation . . . . . 40

<b>6</b>	<b>The z transform and its applications</b>	<b>41</b>
6.1	Introduction . . . . .	41
6.1.1	Motivation . . . . .	41
6.1.2	Definition . . . . .	41
6.1.3	Convergence . . . . .	41
6.2	Properties of the z transform . . . . .	42
6.2.1	Linearity . . . . .	42
6.2.2	Reflection (time reversal) . . . . .	43
6.2.3	Time shift . . . . .	43
6.2.4	Stretch in z plane . . . . .	43
6.2.5	Differentiation in z domain . . . . .	43
6.2.6	Moment . . . . .	44
6.2.7	Convolution in time domain . . . . .	44
6.3	Inverse z transform of rational functions by partial fraction expansion . . . . .	44
6.3.1	General motivation . . . . .	44
6.3.2	Partial fraction expansion with polynomials in $z$ . . . . .	45
6.4	The z transfer function . . . . .	46
6.5	One-sided z transform . . . . .	47
6.5.1	Definition . . . . .	47
6.5.2	Time shift . . . . .	47
6.5.3	Solving difference equations with initial conditions using z transform . . . . .	47
6.6	Reference: (two-sided) z transform . . . . .	49
6.6.1	Definition . . . . .	49
6.6.2	Properties . . . . .	49
6.6.3	Some transformation pairs . . . . .	49
